Tool for Assessing Cultural Competence Training (TACCT)

Organization: Association of American Medical Colleges (AAMC)
Published Date: 2005
http://www.aamc.org/meded/tacct/ [1]

TACCT is an self-administered assessment tool that can be used by medical schools to examine all components of the entire medical school curriculum. TACCT enables schools to identify gaps and redundancies in their curricula, which will enable schools to make the best use of opportunities and resources. TACCT can be used for both traditional and problem-based curricula. The website includes a guide for using the tool, the tool itself, background and context information, and a resource guide.
